

## Student Computer Science Intern

### **Temporary Appointment Summer 2008**

PreventionGenetics is a rapidly growing human DNA testing and DNA banking company located in Marshfield, Wisconsin.

We are seeking a summer intern with a major in computer science, applied mathematics or a related field to work full time developing a software project involving biological sequence analysis. The student should have experience in programming, Java and C#. Undergraduates with two or three years of coursework would be preferred. Extension of the internship through the fall of 2008 is an option.

This is an excellent opportunity for a qualified student to gain an understanding of the layout of binary ABI sequence trace files and how to edit them with software he/she will develop using C# and the Visual Studio 2008 development environment.

To apply, send resume and a brief cover letter to:
