PREVENTION GENETICS

DISEASE PREVENTION THROUGH GENETIC TESTING

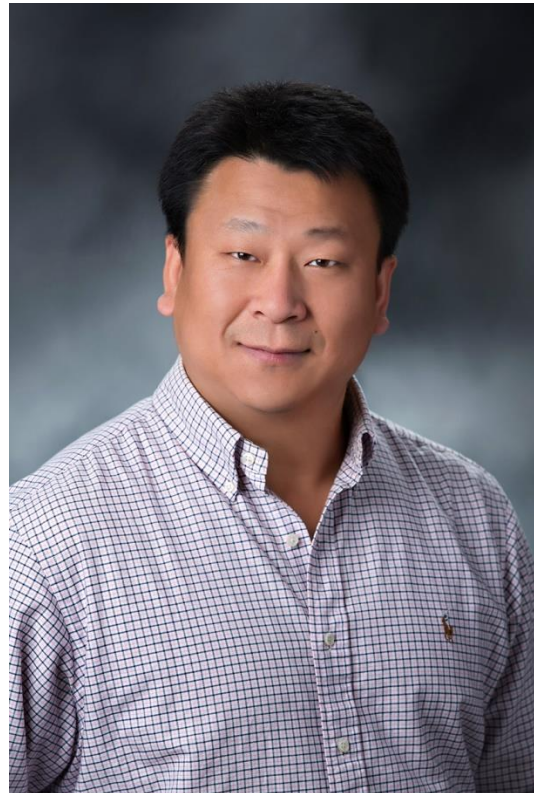

REDUCED PRICING FOR DEL/DUP TESTING VIA ACGH

We're excited to announce that additional efficiencies in our laboratory processes have allowed us to reduce the cost of our del/dup tests via our gene-centric aCGH. The new pricing structure reduces the cost of all del/dup tests via aCGH, with a decrease of up to 30% for larger panels.

JORDAN'S STORY

By Jordan Elliott, Genetic Counseling Student

I began my journey with PreventionGenetics as an ex-battery saleswoman looking for a shot at becoming a genetic counselor (a strange path, believe me, I know). After graduating from Elmhurst College in 2012 with a degree in Biology, I hunted for relevant jobs with no real success; hence the battery sales position. During my brief stint in the world of cars and double A's, I was looking for an opportunity to leverage my chances of getting into a graduate program for genetic counseling, a career I fell in love with during my time as an undergraduate. A lucky google search led me to PreventionGenetics, a genetic testing company who was offering a summer internship for individuals interested in genetic counseling—jackpot! To read more of Jordan's story, click [here](#).

DR. SUN SPECIALIZES IN CARDIOVASCULAR AND METABOLIC DISORDERS

Guoli Sun, M.D., Ph.D., FACMG joined PreventionGenetics in November 2014 as a Clinical Molecular Geneticist. His portfolio includes Cardiovascular and Metabolic disorders.

Dr. Sun received his medical degree from Peking University Health Science Center and his Ph.D. in molecular genetics and microbiology from Rutgers University. His doctoral research involved investigation of Mutagenesis of Human Immunodeficiency Virus Type 1 in a single cycle replication. His studies led to three publications and one of them was cited in NIAID weekly report.

CRANIOSYNOSTOSIS AND RELATED DISORDERS

NextGen Panel

FGFR1, FGFR2, FGFR3, TCF12, TWIST1

\$1,540

2-3 week average TAT

ASGD Conference

Michigan Association of Genetic Counselors

After completing his doctoral degree, Dr. Sun completed a fellowship in Clinical Molecular Genetics at University of Washington Medical Genetics Program. During his training fellowship, he worked on projects focus on molecular mechanism of Collagen Disease and identification of new causative genes by using advanced genomic techniques.

Dr. Sun was drawn to PreventionGenetics by the large test menu and the opportunity to investigate and diagnose a majority of genetic diseases using sequencing and array technologies. During his first visit to PreventionGenetics, he was attracted by the pleasant working environment and beautiful, spread-out campus, which he describes as a blending of "Enterprise spirit and Academic atmosphere". Dr. Sun enjoys designing new tests integrated with complicated bioinformatics calculations and genomic technologies. "With explosive progress of genomic technologies and associated biotechniques, it is a great time to work in the field of genetics disease diagnosis."
