PREVENTION GENETICS

DISEASE PREVENTION THROUGH GENETIC TESTING

Volume 7, Number 3

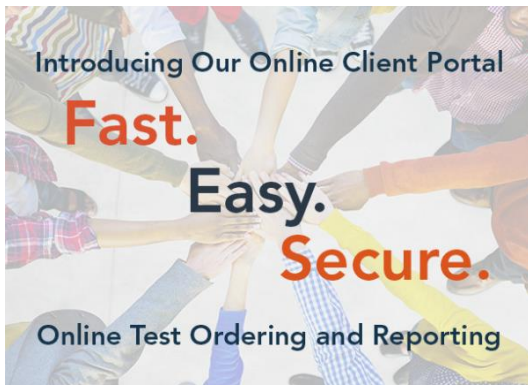

INTRODUCING myPREVENT, OUR NEW ONLINE CLIENT PORTAL

We are excited to announce the release of myPrevent, our online portal! myPrevent makes test ordering and return of test reports easier and faster. Specifically, myPrevent gives you the opportunity to:

- Search and order tests electronically
- Retrieve reports electronically
- Share test requisitions among colleagues
- Access previous patient requisitions in a centralized, online location

For more information or to get started using myPrevent, visit www.preventiongenetics.com/portal

Additionally, our Test Requisition Forms have been updated to offer this electronic reporting. Please replace any older test requisition form versions you may have with our current [forms](#).

NEWBORN SCREENING AWARENESS

DR. GRUBER SPECIALIZES IN NEUROMUSCULAR AND METABOLIC DISORDERS

Angela Gruber, Ph.D., joined PreventionGenetics in June 2014 as a human molecular geneticist. Her portfolio includes neuromuscular disorders such as muscular dystrophies, myopathies, and motor neuropathies.

A native of nearby Auburndale, WI, Dr. Gruber grew up on a family farm, where she found a passion for science, and understanding of disease. As an undergraduate studying biochemistry and molecular biology, she worked as a summer intern at

Each year using only a few drops of blood from the baby's heel, millions of newborns are routinely screened for certain genetic, metabolic, and endocrine disorders prior to discharge from a birthing center or hospital.

For disorders on newborn screening panels, genetic testing decreases morbidity and mortality and improves quality of life. In some cases, disease and disability may be prevented entirely, while in other cases it may only be currently possible to delay the onset or reduce the severity of disease. To put it simply, newborn screening can save babies' lives and provide them a healthier start in life.

At PreventionGenetics, we have a deep appreciation for the importance of early diagnosis and treatment. Preventing morbidity and mortality from genetic disorders is our mission.

See our [Newborn Screening Test Menu](#) next time your patient needs genetic testing in follow-up to a positive newborn screen.

Our Director of Genetic Counseling, Christina Zaleski, also has a very personal reason to be thankful for newborn screening programs. To read about her story, [click here](#).

PreventionGenetics: Disease Prevention Through Genetic Testing.

PreventionGenetics. This experience was her initial exposure to clinical genetics, and she has had an interest in this field since.

As a graduate student at the University of Wisconsin-Madison, Dr. Gruber studied DNA replication and recombination. She studied a mutagenic DNA polymerase and the mechanism action of this polymerase. Additionally, she researched a bacteriophage nuclease that functions similarly to CRISPR/Cas9 as a genome editing tool, with a goal of optimizing and characterizing this nuclease for creating targeted double-strand breaks.

Dr. Gruber was drawn to PreventionGenetics by her previous experience as an intern with the company and a desire for a career that has a "direct impact on human health". She is most excited about "giving families and physicians a molecular diagnosis, that can provide them access to better clinical management, support, and a better understanding of the disorder." In addition to the tests that are currently offered, Dr. Gruber is looking forward to expanding her portfolio to include more comprehensive neuromuscular panels.
