

Prenatal Test Requisition Form and Testing Guidelines

November 16, 2016

PreventionGenetics should be notified in advance of arrival of a prenatal specimen. For all prenatal testing in ongoing pregnancies, we require a signature from the health care provider on our "PRENATAL HEALTH CARE PROVIDER'S STATEMENT," which is included on page 2.

We accept fetal DNA, fetal tissue, cultured fetal cells, or direct CVS/amniotic fluid. However, acceptable specimen type is dependent on the fetal testing requested. Retention of a backup culture of the fetal cells is strongly recommended. Where possible, please ship cultured cells so that they will *arrive* at PreventionGenetics no later than Thursday in the work week. PreventionGenetics does not perform cell culture.

Maternal contamination of fetal sample will be tested using the PreventionGenetics DNA Genotyping Panel. Even in cases of autosomal dominant disorders in which the father has the causative mutation, blood or DNA from the mother is strongly encouraged to be sent for the contamination test. We do not charge extra for Maternal Cell Contamination studies, but the CPT Code, 81265, will be included on invoices and insurance claims as appropriate.

At this time, PreventionGenetics does not offer aCGH or MLPA for prenatal specimens, however, if a copy number variation (CNV) was able to be confirmed by an alternate method (PCR) in a proband tested at PreventionGenetics, we may be able to offer targeted deletion or duplication testing prenatally. Please call and speak to one of our genetic counselors to see if this is a possibility. For any CNV where the mother is a carrier, we are unable to offer targeted testing for that CNV.

PreventionGenetics does not perform prenatal testing for sex. We will also not report fetal sex unless this is critical for interpretation of test results. PreventionGenetics does not perform pre-implantation DNA testing.

See our "Specimen Requirements" for acceptable prenatal specimens (page 7 of Prenatal Test Requisition Form).

Familial Variant Testing (Test Code 990, \$990)

Familial variants must be known in advance from testing of parents, affected siblings or other relatives. These variants must be confirmed at PreventionGenetics in the parents and/or proband. Parental specimens may be sent in advance of the prenatal specimen. There is no additional charge for parental testing or for maternal cell contamination testing, however, additional CPT codes for parental and MCC testing may be included at time of invoicing.

Turnaround Time: 8-10 calendar days from receipt of specimen *and* signed PROVIDER'S STATEMENT.

Next-Gen Sequencing for Ongoing Pregnancy (see standard prices listed on our web site)

We will also perform Next-Gen tests for ongoing pregnancies. We expect that the ordering provider will take responsibility for the appropriateness of the requested testing. There is no additional charge for maternal cell contamination testing.

Turnaround Time: The great majority of NGS tests are completed within 28 days from date of specimen and signed PROVIDER'S STATEMENT receipt. **Our formal STAT option is not available.** We will courtesy prioritize requests related to ongoing pregnancies.

Full Gene Sanger Sequencing for Ongoing Pregnancy (see standard prices listed on our web site)

We will also perform Sanger full gene sequencing tests for ongoing pregnancies. We expect that the ordering provider will take responsibility for the appropriateness of the requested testing. There is no additional charge for maternal cell contamination testing.

Turnaround Time: The great majority of Sanger tests are completed within 18 days from date of specimen and signed PROVIDER'S STATEMENT receipt for a single gene. Our STAT option is available for a 25% *additional* charge. The great majority of STAT requests are completed within 8 calendar days. If we are unable to complete STAT requests within 10 days, the surcharge will be waived.

Testing in Cases of Fetal Demise or Pregnancy Termination (see standard prices listed on our web site)

In the case of fetal demise or pregnancy termination, no "PRENATAL HEALTH CARE PROVIDER'S STATEMENT" is required. Our standard specimen requirements and turnaround times apply.

PRENATAL HEALTH CARE PROVIDER'S STATEMENT*

September 12, 2012

* **Note:** This Statement is required, and applies to all cases of ongoing pregnancy.

Mother's Name: _____

Date of Birth: _____

My signature below indicates all of the following:

- I take responsibility for the appropriateness of the requested testing.
- I have explained the purpose of the prenatal testing that I have requested.
- I have provided appropriate genetic counseling to my patient.
- I have given the opportunity for the patient to ask questions.
- I am responsible for obtaining written or verbal informed consent (ensuring that my patient understands risks, benefits and limitations of the testing and the implications of the results).

Health Care Provider Signature Date

Printed Name

Prenatal Test Requisition Form

(revised 12/30/2016)

Ordering Checklist:

- Fetal specimen
- Family member specimen(s) – as needed
- Prenatal Healthcare Provider Statement (enclosed)

Instructions:

- All testing must be ordered by a qualified healthcare provider.
- Fetal, parental and/or proband information to be completed on one form.
- Please see Prenatal Guidelines above for further details.

Test Selection

Fetal Test Selection

Please list below the tests that are to be performed. If targeted testing, please include those details. For other tests, the Test Numbers and Names can be obtained from our web site. Please include any special instructions in the comments section. The tests will be performed in the order listed unless otherwise specified. Unless specifically requested, we will run Sanger panels sequentially as listed in our test descriptions. ** We offer a STAT option for Sanger sequencing and gene-centric aCGH. The great majority of STAT tests are completed within 8 calendar days. If we are unable to complete STAT requests within 10 days, surcharge will be waived. NextGen panels are not currently available to be ordered STAT. All testing related to an ongoing pregnancy is courtesy expedited. Gene-centric aCGH and MLPA are not validated for prenatal samples; CMA is validated for non-ongoing pregnancies only.

Clinical Information (Strongly Recommended)

Other relevant clinical information (Labs, ultrasound results, biopsies, other genetic testing performed, etc). Please attach pedigree if possible.

Maternal Test Selection

For Targeted Prenatal Testing (Test Code 990), positive controls from parents and/or proband are required. Maternal cell contamination (MCC) studies (Test Code 800, CPT Code 81265) are strongly recommended for any fetal testing and offered at no additional charge. If maternal sample being sent for full gene sequencing (Sanger or NGS), please complete the fillable Test Code and Name section with test desired.

<input type="checkbox"/>	Positive control for variant(s) (Test Code 100, 200, or 300) – no charge	Gene(s):	Variant(s):	Report wanted? **As part of Test Code 990, parental carrier results can be issued upon request at no additional charge.

Billing Instructions

1. Please choose one of the three billing options:

- Institutional
- Individual
- Insurance

2. Provide all information for the selected option only

Note: Patient testing will be delayed until all of the billing requirements have been met. Please print clearly. If Individual/Insurance billing information is incomplete, the Institution will be billed. Tests that are cancelled while in progress will be billed for the amount of work completed up to that point. If the patient's specimen is collected in New York, a New York State Non-Permitted Laboratory Test Request approval letter (see web site) must be included before testing will proceed.

Specimen Requirements

Below you will find our preferred specimen types by methodology and turnaround times (TAT).
*STAT TAT (8-10 calendar days) available for 25% surcharge for Sanger sequencing. Cannot be guaranteed for aCGH.

General Specimen Requirements (For extracted DNA and other acceptable types, see specific test heading below)

WHOLE BLOOD: Collect 3-5 ml of whole blood in EDTA (purple top tube) or ACD (yellow top tube), minimum 1 ml for small infants.

SALIVA: Oragene™ Saliva Collection kit used according to manufacturer instructions.

**Saliva is not accepted for MLPA tests (except Test Code 1941 only).

FETAL (CVS/AMNIOCYTES) AND OTHER CELL CULTURE: Culture and send at least two, T-25 flasks of confluent cells. For full gene Sanger sequencing, two to four flasks per gene tested is preferred (dependent on size of gene). For NGS panels, two flasks are often sufficient; however, some panels may require additional flasks. We recommend maintaining a local back-up culture. Please contact us for additional details.

**CVS and amniocytes not accepted for gene-centric aCGH or MLPA tests at this time; acceptable for CMA for non-ongoing pregnancies only at this time.

FRESH, FROZEN TISSUE: Collect 2mm x 2mm x 2mm tissue and flash freeze. Tissue to be sent frozen (preferably dry ice). Please contact us for additional details.

Prenatal Targeted Testing (Test Code 990 only)

DIRECT AMNIOTIC FLUID/CHORIONIC VILLI: Collect 10-15 ml of direct amniotic fluid or 5-10 mg cleaned CVS tissue (~15-20 cleaned villi). We recommend maintaining a local back-up culture.

Next-Gen Sequencing (Great majority of tests completed within 28 days.)

DNA: Send in screw cap tube at least 10 µg of purified DNA at a concentration of at least 50 µg/ml (indicate concentration on tube label).

Sanger Sequencing (Great majority of tests completed within 18 days. Multiple genes are run sequentially unless concurrent testing is marked; great majority of Sanger panels are completed within 2-4 weeks.)*

DNA: Send in screw cap tube at least 15 µg of purified DNA at a concentration of at least 20 µg/ml (indicate concentration on tube label). For tests involving the sequencing of more than three genes, send an additional 5 µg DNA per gene.

SEMEN: Collect 1-2 vials and flash frozen. Vials to be sent frozen (preferably on dry ice). Please contact us for details.

Deletion/Duplication via aCGH & MLPA (Great majority of del/dup tests via aCGH are completed within 28 days; great majority of MLPA tests are completed within 20 days.)*

DNA: Send in screw cap tube at least 1 µg of purified DNA at a concentration of at least 100 µg/ml (indicate concentration on tube label). We cannot accept DNA extracted from cultured cells.

**DNA extracted from Saliva, CVS, and amniocytes not accepted for gene-centric aCGH or MLPA at this time.

Whole-Genome Chromosomal Microarray (Great majority of tests are completed within 20 days.)

DNA: Collect at least 5 µg of DNA in TE (10 mM Tris-cl pH 8.0, 1mM EDTA), dissolved in 200 µl at a concentration of at least 100 ng/ul (indicate concentration on tube label). DNA extracted using a column-based method (Qiagen) or bead-based technology is preferred.

**DNA extracted from CVS and amniocytes acceptable for CMA for non-ongoing pregnancies only at this time.

Shipping Instructions & Additional Information

Shipping/Handling Instructions

Please label all specimen containers with the patient's name, date of birth and/or ID number. At least two identifiers should be listed on specimen containers. We accept specimen deliveries Monday-Saturday for all specimen types except cell cultures, direct amniotic fluid, or direct chorionic villi. Cell culture deliveries are routinely accepted Monday-Thursday and require advance notice of arrival. If a Friday or Saturday delivery is necessary, please contact us to make arrangements. Saturday delivery should especially be avoided when possible as prenatal specimens are not processed over the weekend. Holiday schedules will be posted on our home page at least one week prior to major holidays.

BLOOD: Do not freeze. During hot weather, include a frozen ice pack in the shipping container. Place a paper towel or other thin material between the ice pack and the blood tube. In cold weather include an unfrozen ice pack in the shipping container as insulation. At room temperature, blood specimen is stable for up to 48 hours. If refrigerated, blood specimen is stable for up to one week.

DNA: DNA may be shipped at room temperature. Label the tube with the composition of the solute, DNA concentration as well as the patient's name, date of birth, and/or ID number. We only accept genomic DNA for testing. We do NOT accept products of whole genome amplification reactions or other amplification reactions.

CELL CULTURES & DIRECT AF/CVS: We are NOT able to culture cells. Send specimens in insulated, shatterproof container overnight. Cell cultures may be shipped at room temperature or refrigerated.

Address

Diagnostic Lab
PreventionGenetics
3800 S. Business Park Ave.
Marshfield, WI 54449
USA

Testing Kits

Clinical testing kits with prepaid return shipping are now available for our U.S. clients. We are able to provide Clinical Testing Kits to our international clients without the return postage at this time. To order kits, submit requests through our Electronic Order Form on our web site or contact our Client Service Representatives at 715-387-0484, ext. 0.

Prenatal Testing

Please sign Prenatal Healthcare Provider Statement and contact us in advance regarding prenatal test requests.

DNA Genotyping Panel

For quality control purposes, the PreventionGenetics DNA Genotyping Panel is performed on all clinical specimens. Genotyping results are **not** included in test reports.

DNA Banking

DNA Banking has a reduced price of \$98 for patients if clinical testing is also being performed with us. For DNA Banking, see our DNA Banking Process and DNA Banking Forms. For questions related to DNA Banking, contact our DNA Banking Director at 715-387-0484, ext. 151 or email dnabanking@preventiongenetics.com.

Contact Us

For additional questions or concerns, please contact our Client Service Representatives at 715-387-0484, ext. 0 or our Genetic Counseling Team at ext. 208 or clinicaldnatesting@preventiongenetics.com.
