- › Pre-packaged, return postage paid kits for specimen collection.
- › Reliable extraction, quantification, and storage of DNA for a minimum of 50 years.
- › Confidentiality of all personal information.
- › Competitive rates with no annual fees.
 - Single individual - \$149
 - 2-4 family members - \$139 each
 - 5 or more members - \$129 each

"There are not enough words to describe the value of DNA banking. It allowed me to test my son's DNA (after his death) so I could test my other son and grandchildren's DNA to see if they were at risk for heart disease."

~ CLIENT FROM MARYLAND

DISEASE PREVENTION THROUGH GENETIC TESTING

WHAT IS DNA BANKING?

- › DNA banking is the secure storage of an individual's DNA for future use.
- › A small blood sample is taken to extract the DNA.
- › DNA banking is important for everyone. It is especially urgent for the elderly and terminally ill.
- › Banked DNA is your personal property. It can only be accessed by you or your Authorized Representative.

BE A HELPING HAND IN YOUR FAMILY'S HEALTH HISTORY.

You plan for your family's financial future by purchasing life insurance. You prepare a will to leave your valuable assets to your family. Now, you can plan for the future health of your whole family by depositing your genetic material in PreventionGenetic's DNA Bank!

WHY SHOULD MY FAMILY BANK OUR DNA?

- › Your DNA is available now. Don't let the opportunity to store your genetic information pass.
- › You want to give your family the best chance to utilize future advances in medicine.
- › You or a family member have a specific health condition and are concerned that other family members might be at risk.
- › A family member may need genetic testing in the future and the correct results may only be possible if your DNA is also tested.
- › Current technology has failed to find a genetic cause for what appears to be an inherited disease in your family. DNA Banking allows your family to benefit from future advances in genetic testing technology.
- › Banking is storage of your family's genetic history.
- › You have a terminal illness and there is little time for genetic testing.

The future testing of your banked DNA may prevent suffering and lower healthcare costs for your family members.
